Art Unit: 3742

The amendment filed 1/28/09 is acknowledged. Claims 4, 6, 8, 10-13, 29, 31, and 33-45 are pending.

Claim Objections

Claim 31 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. The limitation of "projecting past the frame" is already recited in claim 6.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 4, 6, 29, 33-38, 40, and 41 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat. 4884683.

It is noted that in the body of the claim, "PCT elements" and "a heating device" have been considered as intended use, and do not constitute patentable weight as claimed.

Ford (US 4,884,683) discloses a bottle carrier or tray or device 22 having an insulating frame (Fig. 1 or 4, tray 22 made of plastics, column 4, line 11) having parallel, spaced longitudinal struts (i.e., dividers) and longitudinally spaced crossbars (i.e., also dividers) 62 linking the longitudinal struts, and at least one contact plate 30 "positively held" in the frame or tray 22 (on which can be placed PTC elements if so desired), contact plates 30 project past the frame at each end, and the ends of contact plates 30 are capable of use as "terminal lugs," as claimed.

It is further noted that since the claimed frame is an article or product, the method or process of forming or making or assembling the contact plate or base to the frame by molding, laminating, bonding is not germane to the patentability of the claimed frame or tray as a whole since the final product is still the product itself (i.e., product by process is still a product).

With respect to claim 29, in Figure 1 of Ford, one of element 30 is a contact plate, which over most of its length is held in grooves or channels 32 of the frame or tray 22 formed in longitudinal struts or dividers 58.

Allowable Subject Matter

Art Unit: 3742

Claims 39, and 42-45 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 8, 10-13, and 31 are allowed.

Response to Arguments

Applicant's arguments filed 1/28/09 have been fully considered but they are not persuasive. Applicant asserts that US'683 does not disclose an electrically conductive "contact plate." Referring to Fig. 1, however, and col. 3, lines 1-23, US'683 discloses metallic contact plates 30 that extend past the frame at both ends. Again, the claims do not structurally distinguish the invention from the device of US'683. A PTC element can be placed on contact plate, as claimed.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
